

# Hands on Tutorials

## Precise Micro Sampling With a Benchtop Micromanipulator

**Tuesday - 5:45pm at booth #1038**

Microscopic sample preparation can be difficult to near impossible as structures become smaller. We will show how a benchtop micromanipulator can be used to probe, scrape, cut, and isolate materials on a surface.

*Attendees will be able to work directly with the system and are encouraged to bring samples they would like to try out during the Workshop.*

## Microplastics Handling and Detection Workshop

**Wednesday - 5:45pm at booth #1038**

Microplastics represent a new class of environmental contaminant. We will demonstrate imaging and micro sampling on microplastics samples as well as a discussion on comprehensive microplastics detections systems.
