Probe Bender

PB-1

Accessory for bending tungsten probe by specific angle

◆ Useful for situations where the objects needs to be placed in a deep position and the standard tungsten probe cannot reach the surface under normal operation.

◆ Place tungsten probe in position and close the cover as shown below.

◆ Possible to change angle by replacing another block.

◆ The accessory with Axis Pro can operate samplings which have never been operated.

《Main specification》

- Accepts tungsten probe-manufactured-by Micro Support
- Size of tungsten probe : length 40mm × outside diameter 0.6mm
- Set 15° or 30° (adjustment by shim,too)
- Bend position : ~3mm or ~5mm from tip
- Capable of bending 2 tungsten probes at the same time

Place one or two tungsten probe in holder.

Set guide plate.

Close cover slowly and press lightly with finger.

It's completed.
